INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

(Chapter II of the Patent Cooperation Treaty)

(PCT Article 36 and Rule 70)

Applicant's or agent's file reference P03019	FOR FURTHER A	CTION	See Form PCT/IPEA/416			
International application No. PCT/NO2004/000211	International filing date 08.07.2004	(day/month/year)	Priority date (day/month/year) 09.07.2003			
International Patent Classification (IPC) or national classification and IPC E21B43/36						
Applicant NORSK HYDRO ASA et al.						
This report is the international preliminary examination report, established by this International Preliminary Examining Authority under Article 35 and transmitted to the applicant according to Article 36.						
2. This REPORT consists of a total of	of 5 sheets, including t	his cover sheet.				
3. This report is also accompanied b			** 1-			
a. Sent to the applicant and to						
sheets of the description, claims and/or drawings which have been amended and are the basis of this report and/or sheets containing rectifications authorized by this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions).						
sheets which supersed beyond the disclosure Supplemental Box.	de earlier sheets, but w in the international app	hich this Authority consideration as filed, as indic	ders contain an amendment that goes ated in item 4 of Box No. I and the

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/NO2004/000211

Reference is made to the following document D1 = WO 01/85297 A1

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

V-1 D1, which is considered as the closest prior art, describes a pipe separator for separation of fluids, for example separation of oil, gas and water in connection with the extraction and production of oil and gas from formations under the sea bed (page 1, lines 29-32), comprising an extended, tubular separator body (1) that has a diameter at the inlet and outlet ends that is mainly equal to or slightly greater than the diameter of the transport pipe to which the separator body is connected (page 1, lines 5-7; page 9, lines 1-8; fig. 4), a separator device, expediently a cyclone, arranged upstream of the separator body for separation of any gas present (page 2, lines 14-17) and an electrostatic coalescer arranged in connection with the pipe separator, wherein the electrostatic coalescer is incorporated in and constitutes an integrated part of the separator body (fig. 2).

The subject-matter of claim 1 is therefore not new and the claim does not meet the corresponding requirement of Art. 33(3) PCT.

For completeness it is also pointed out that the presence of a gas separator (anyhow disclosed in D1) does not limit the scope of the claim, has it is not part of the "pipe separator" which is claimed.

- V-2 Claims 2, 4 and 5 specify features of the cyclone which is not part of the device claimed in claim 1. The claims therefore do not add any further limitation to the subject of claim 1 (a pipe separator) and therefore they are also not new. Should claim 1 having been directed to the combination of a pipe separator and a cyclone then the subject-matter of claims 2,4 and 5 would have been new but it would not have involved an inventive step, as the features of said claims are routinely used in gas separators.
- V-3 It is apparent that under circumstances the use of two separators in series may become preferable, and therefore the subject-matter of claim 3 does not involve an

inventive step.
